Maid Ascic

Full Stack Software Engineer

maid.ascic@proton.me | +436764056977 | https://ascija.github.io

Summary

Full Stack Software Engineer with 5 years of hands-on experience in developing backend systems, web applications and desktop applications with system administration and maintenance included. A fast learner with a proven track record of delivering high-quality software solutions. Highly adaptable and eager to embrace new technologies when required. Thrives in agile, fast-paced environments and excels at collaborating with cross-functional teams, clients, and stakeholders through clear and effective communication.

Experience

AVL List Graz, Austria

Full Stack Software Engineer June, 2022 - present

- Built and maintained full-stack web and desktop solutions in .NET/C#, ensuring stable functionality across UI, business logic, and data layers.
- Streamlined cross-team workflows by integrating internal tools and systems, improving data flow and reducing manual steps across departments.
- Contributed to DevOps workflows (CI/CD pipelines and automated deployments), increasing release consistency and reducing manual operations.
- Performed QA and performance testing of internal APIs and tools, detecting and resolving issues before production release.
- Managed and maintained servers hosting internal tooling, improving reliability and uptime.
- Provided first-line technical support and bug fixes to ensure timely resolution and business continuity.

Freelance

Full Stack Software Engineer June, 2019 - June, 2022

- Designed and developed responsive websites and portfolios using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and optimized performance.
- Built dynamic front-end interfaces with React, focusing on reusable components and seamless user experiences.
- Created and customized WordPress websites for businesses, including custom themes, plugins, and content management features.
- Integrated APIs and third-party services to enhance functionality and streamline client workflows.
- Collaborated with clients to define project requirements and deliver modern, user-friendly web solutions aligned with brand goals.
- Optimized websites for SEO, accessibility, and performance, improving visibility and load times.
- Managed end-to-end deployment using platforms such as Hostinger and cPanel hosting environments.
- Developed APIs and backend solutions using NodeJS

BILD IT Tuzla, Bosnia and Herzegovina

Full Stack Software Engineer September, 2018 - June, 2019

- Designed and developed a CRM software solution with key modules for client management, task tracking, and automated reporting, ensuring seamless integration between frontend and backend systems.
- Utilized the Java stack (Java, Spring Boot, MySQL) to build a robust, scalable architecture and implemented RESTful APIs for data exchange across internal tools and services.
- Acted as a teaching assistant in an intensive coding bootcamp, contributing to architecture/design sessions while mentoring junior developers through technical guidance, code reviews, and continuous learning support.
